HUMAN+ Showcases the Future of Our Species

The Future Laboratory and the ArtScience Museum unveil an exhibition to examine our future in the wake of the coronavirus pandemic.

“Without a doubt, 2020 has been the year that reminds us of how interconnected we are, as a species,” said Huma Nagir, Executive Director of Future Laboratory. “What does it mean to be human? Will we continue to be defined by the things we wear or by our inherent traits? What is human nature?”

“A human nature that is firmly based in the everyday realities of our lives,” she continued. “This exhibition is an opportunity to reflect on our innate need for community, interconnectedness, and empathy.”

The HUMAN+ exhibition, which opens to the public on 21 March 2021, invites visitors to explore the world of the future through a series of immersive experiences. The exhibition features a range of interactive installations, including a multi-sensory experience that explores the concept of time, a space that allows visitors to design their own future, and a interactive art installation that explores the relationship between artificial intelligence and human creativity.

The exhibition also includes a series of talks and workshops, featuring experts from a variety of fields, including science, technology, art, and philosophy. These events aim to encourage visitors to think critically about the future and to consider their own role in shaping it.

“HUMAN+ is an opportunity for us to reflect on our shared humanity in the face of the current pandemic,” Nagir said. “It’s a chance to envision a future where we are more connected, more empathetic, and more responsible for one another.”

The exhibition will run until 18 June 2021 at the ArtScience Museum, Singapore. For more information, visit humaan.org. For more information about the Future Laboratory, visit futur laboratory.org.
