Nadine the social robot will take you straight to \textsuperscript{39}Uncanny Valley\textsuperscript{39}

By admin on December 30, 2015

Professor Thalmann’s robotic doppelganger was created to turn into a personalized assistant or a companion for children and the elderly in the long term. She believes social robots like her creation could at some point turn into genuine-life C-3POs “with information of language and etiquette.” For now, she and her team are putting Nadine to perform as a receptionist at the university.

Besides the humanoid robot, NTU Singapore has also unveiled a telepresence machine named Edgar. Not like his eerily human-like sister, he’s what you’d anticipate a robot to look like, but with two arms and a rear-projection screen for a face. So long as you use a special webcam from your place, Edgar can mimic not only your facial expressions, but also your upper entire body movements.

Examine out Nadine in action at an finish-of-the-yr get together in 2013:
